

Identification of Commercial Plant Materials

**Macro-/microscopic Analyses, DNA barcoding,
and Phytochemical Analyses**

Seon Beom Kim, Charlotte Simmler, Guido F. Pauli

Chosen Plant Materials

Plant Name "Pharmacopoeial name"	Common Name	Rank ¹	Plant Part	Class of Metabolites
<i>Marrubium vulgare</i> L. "Marrubi herba"	Horehound	1	Stems, leaves	Terpenoids (e.g. marrubiin) ² Flavonoids (e.g. apigenin, luteolin) ³ Phenolic acids, and phenylethanoids ⁴ Tannins Chlorophylls
<i>Pausinystalia yohimbe</i> (K. Schum.) Pierre "Yohimbe cortex"	Yohimbe	12	Bark	Alkaloids (e.g. corynanthine, yohimbine) ^{5, 6} Tannins
<i>Trigonella foenum-graecum</i> L. "Foenugraeci semen"	Fenugreek	22	Seeds	Saponins (e.g. diosgenin, yamogenin) ⁷ Flavonoids (e.g., apigenin, luteolin) ^{8, 9} Pyridine-type alkaloids (e.g., trigonelline, gentianin) ¹⁰ Carbohydrates (Galactose-mannose gum) Amino acids Fatty acids ^{10, 11}
<i>Epidemedium</i> sp. ^{12, 13}	Horny Goat Weed	29	Aerial parts	Terpenoids Flavonoids (e.g. icariin) ^{14, 15} Lignans ¹⁶ Chlorophylls
<i>Cassia senna</i> L, <i>Cassia angustifolia</i> VAHL "Senna folium"	Senna	34	Leaves	Anthraquinones (e.g. sennosides) ^{17, 18, 19} Flavonoids, phenolic acids ¹⁹ Tannins Chlorophylls Fatty acids

Chosen Plant Materials

These five plants materials were chosen according to:

- Their mainstream **usage** by the U.S. public
- Their **phytochemical diversity**
- The diversity in the parts of the plants **traditionally used**:
 - Leaves
 - Aerial parts
 - Bark
 - Seeds
- The presence of compounds that could **interfere** with bioassays or DNA barcoding analyses including:
 - Polymeric tannins
 - Fatty acids
 - Chlorophylls
 - Polysaccharides

General Experimental Procedures

• Microscopic analyses:

- The acquired plant powder were prepared with chloral hydrate clearing solution on a microscopic slide
- The slides were analyzed by the Leica DMIRB microscopy (Leica, Germany) system with LAS V4.6 microscope Imaging software
- The collected microscopic features were compared to the information collected in the literature

• DNA barcoding (See related and shared protocol at <https://doi.org/10.7910/DVN/M8CW8Z>.)

• Extraction (see scheme next slide):

- Using the DIONEX ASE 350, botanical plant materials were successively extracted by
 - ▶ 1st_ *n*-Hexane
 - ▶ 2nd_ 50% CHCl₃/MeOH
 - ▶ 3rd_ 50% MeOH/Water
- Each extract obtained from the steps 1st-3rd, were combined to yield a crude extract containing metabolites of all polarity ranges.
- To evaluate the reproducibility of the process, each plant material was extracted three times and codified #A, #B and #C
- The extraction yields and phytochemical fingerprints were compared between each replicate
- The extraction parameters were as follows:
 - ▶ Sample weight (10 g); cell type (100 ml); temperature (60°C); heat (5min); static time (15min); cycles (1 time); rinse volume (30%); purge (200s)

• Phytochemical fingerprinting

- The chemical fingerprints of plant materials were performed by HPTLC, UHPLC-UV, and ¹H NMR
- The composition of each botanical extract was compared with the corresponding specific phytochemical marker.

Schematic Overview: From Botanical Identification to Extraction and Phytochemical Fingerprinting

[ASE_350 extraction instrument]

ASE_350 Extraction parameter

Extraction Condition	Value
Sample Weight (g)	10.0
Cell Type (ml)	100
Temperature (°C)	60
Heat (min)	5
Static Time (min)	15
Cycles	1
Rinse Volume (%)	30
Purge (s)	200

Botanical Information (*Epimedium sagittatum*)

<https://www.ncbi.nlm.nih.gov/Taxonomy/>

- **Taxonomy ID:** 253616 (for references in articles please use NCBI:txid253616)
- **Scientific name:** *Epimedium sagittatum* (Siebold & Zucc.) Maxim.
- **Inherited blast name:** eudicots
- **Rank:** species
- **Genetic code:** [Translation table 1 \(Standard\)](#)
- **Mitochondrial genetic code:** [Translation table 1 \(Standard\)](#)
- **Plastid genetic code:** [Translation table 11 \(Bacterial, Archaeal and Plant Plastid\)](#)
- **Lineage (full)**

Cellular organisms; Eukaryota; Viridiplantae; Streptophyta; Streptophytina; Embryophyta; Tracheophyta; Euphyllophyta; Spermatophyta; Magnoliophyta; Mesangiospermae; eudicotyledons; early-diverging eudicotyledons; Ranunculales; Berberidaceae; Berberidoideae; Epimedium

- ▶ **English common name for *Epimedium* sp.:** Horny Goat Weed
- ▶ **Part of the plant traditionally used:** Leaves
- ▶ **Major Phytochemicals:** Flavonoids (Icariin^{14, 15}), lignans¹⁶

Phytochemical Fingerprinting by HPTLC (*Epimedium species*)

[A] HPTLC

▶ Sample Preparation

- Crude extracts: 10 mg/ml in the 50% CH₃CN/H₂O
- Reference compound: 1 mg/ml in the 50% CH₃CN/H₂O

▶ HPTLC Plate

- HPLTC Silica gel F₂₅₄ [EMD]

▶ HPTLC Solvent System

- EtOAc/acetic acid/formic acid/water (100/11/11/26)

▶ HPTLC Image Capture

- UVP MultiDoc-It Digital Imaging system (254 nm, 365nm)

▶ HPTLC condition

- Instrument: CAMAG Automatic TLC Sampler 4
- Band Length (mm): 4.0
- Application volume (μl): 5.0
- Filling speed (μl/s): 11.0
- Predosage volume (nl): 200
- Retraction volume (nl): 200
- Dosage speed (nl/s): 100
- Rinsing vacuum time (s): 6
- Filling vacuum times (s): 0
- Gas: Air
- TLC size (cm): 5*10

Phytochemical Fingerprinting by UHPLC (*Epimedium species*)

[B] UHPLC (254 nm)

Gradient method

► Instrument

- Shimadzu UHPLC (Shimadzu Corp) with DAD and fluorescence detector
- Column: Kinetex 1.7 μm XB-C18 100Å column (50.0 X 2.1 mm Phenomenex, USA)
- Software: Shimadzu Labsolution software package
- Solvent system: CH₃CN/Water gradient from 95% to 5% water with 0.1% formic acid

► Sample preparation

- Crude extracts (10 mg/ml) and reference compound (1 mg/ml) prepared in 50% CH₃CN/water

Phytochemical Fingerprinting by $^1\text{H-NMR}$ (*Epimedium species*)

[C] $^1\text{H-NMR}$

► Sample Preparation

- Crude extracts: 123#A: 7.32 mg/200 μl ; 123#B: 7.50 mg/200 μl ; 123#C: 7.72 mg/200 μl
- Icaritin: 0.86 mg/200 μl
- Solvent: $\text{DMSO-}d_6$ (99.9%), Cambridge Isotope Laboratories, Inc. (Cas #: 2206-27-1, Lot #: 12G-464)

► Instrument

- Jeol ECZ 400 MHz in 3 mm NMR tube under the Ultra COOL probe.

► Parameter (qNMR)

- Temperature 25°C
- 90° single-pulse (relaxation delay: 60sec, receiver gain: 46, number of scan: 64)

Conclusions

Identification of a Commercial Plant Powder Declared as *Epimedium* Leaves

- The macroscopic and microscopic analyses confirm that our plant material contains grinded leaves of plant material.
- The DNA barcoding analyses confirm that the commercial sample contains (an) *Epimedium species*. There was slightly lower alignment scores and sequence homologies with *E. sagittatum* as opposed to alignment scores with registered *E. koreanum* DNA sequences in GenBank.
- All acquired plants phytochemical fingerprints (HPTLC, UHPLC-UV and ¹H-NMR) confirm the presence of the characteristic marker Icariin in all extract replicates (A-C).
- There is no clear evidence that the commercial sample contains only *E. sagittatum*. The commercial sample could contain a mixture of closely related *Epimedium species*.

Phytochemical Fingerprinting by HPTLC (*Marrubium vulgare*)

[A] HPTLC

► Sample Preparation

- Crude extract: 10 mg/ml in the 50% CH₃CN/H₂O
- Reference compounds: 1 ml/ml in the 50% CH₃CN/H₂O

► HPTLC Plate

- HPTLC Silica gel F₂₅₄ [EMD]

► HPTLC Solvent System

- Hexanes/acetone (50/50)
- EtOAc/acetic acid/formic acid/water (100/11/11/26)

► HPTLC Image Capture

- UVP MultiDoc-It Digital Imaging system (254 nm, 365nm)

► TLC Visualization reagent

- 5% Vanillin-sulphuric reagent

► HPTLC condition

- Instrument: CAMAG Automatic TLC Sampler 4
- Band Length (mm): 4.0
- Application volume (μl): 5.0
- Filling speed (μl/s): 11.0
- Predosage volume (nl): 200
- Retraction volume (nl): 200
- Dosage speed (nl/s): 100
- Rinsing vacuum time (s): 6
- Filling vacuum times (s): 0
- Gas: Air
- TLC size (cm): 5*10

Phytochemical Fingerprinting by UHPLC-UV (*Marrubium vulgare*)

[B] UHPLC (190 nm)

Gradient method

► Instrument

- Shimadzu UHPLC (Shimadzu Corp) with DAD and fluorescence detector
- Column: Kinetex 1.7 μm XB-C18 100 \AA column (50.0 X 2.1 mm Phenomenex, USA)
- Software: Shimadzu LabSolutions software package
- Solvent system: CH_3CN /Water gradient from 95% to 5% water with 0.1% formic acid

► Sample preparation

- Crude extracts (10 mg/ml) and reference compound (1 mg/ml) prepared in 50% CH_3CN /water

Phytochemical Fingerprinting by ^1H -NMR (*Marrubium vulgare*)

[C] ^1H -NMR

► Sample preparation

- Crude extracts: 123#A: 5.13 mg/200 μl ; 123#B: 5.08 mg/200 μl ; 123#C: 5.59 mg/200 μl
- Marrubin: 0.91 mg/200 μl
- Solvent: $\text{DMSO-}d_6$ (99.9%), Cambridge Isotope Laboratories, Inc. (Cas #: 2206-27-1, Lot #: 12G-464)

► Instrument

- Jeol ECZ 400 MHz in 3 mm NMR tube under the Ultra COOL probe.

► Parameter (qNMR)

- Temperature 25°C
- 90° single-pulse (relaxation delay: 60sec, receiver gain: 46, number of scan: 64)

Conclusions:

Identification of a Commercial Plant Powder declared as *Marrubium vulgare*

- Microscopic analyses of **the commercial sample** showed paracytic stomata, collenchyma, trichomes, and vessels of plant aerial parts. However, some other unattributable fragments were also observed. Collectively, this data confirmed that the sample contains aerial parts.
- The DNA barcoding analysis led to the amplification of multiple ITS-2 and psbA-trnH sequences, possibly indicating a mixture of **species**. However, rbcL and matK sequences obtained from the commercial sample perfectly aligned with those obtained from the Herbarium specimen, and with sequences referenced in Genbank. Therefore, the commercial sample contains ***M. vulgare***.
- Marrubiin defined as a specific marker of ***M. vulgare***, was not detected in the three crude extracts (A-C). LC-MS analysis will be necessary to confirm the observations made by comparing the HPTLC, UHPLC-UV and ¹H-NMR fingerprints, and possibly detect marrubiin.
- On the basis of all these results the commercial sample could contain mixture of botanical species., including ***M. vulgare***.

Herbarium Specimen used a DNA Barcoding Reference

From the Field Museum of National History in Chicago

Phytochemical Fingerprinting by HPTLC (*Pausinystalia johimbe*)

[A] HPTLC

Yohimbine HCl

► Sample Preparation

- Crude extract: 10 mg/ml in the 50% CH₃CN/H₂O
- Reference compounds: 1 ml/ml in the 50% CH₃CN/H₂O

► HPTLC Plate

- HPTLC Silica gel F₂₅₄ [EMD]

► HPTLC Solvent System

- EtOAc/acetic acid/formic acid/water (100/11/1/26)

► HPTLC Image Capture

- UVP MultiDoc-It Digital Imaging system (254 nm, 365nm)

► TLC Visualization reagent

- 5% Vanillin-sulphuric reagent

► HPTLC condition

- Instrument: CAMAG Automatic TLC Sampler 4
- Band Length (mm): 4.0
 - Application volume (μl): 5.0
 - Filling speed (ul/s): 11.0
 - Predosage volume (nl): 200
 - Retraction volume (nl): 200
 - Dosage speed (nl/s): 100
 - Rinsing vacuum time (s): 6
 - Filling vacuum times (s): 0
 - Gas: Air
 - TLC size (cm): 5*10

Phytochemical Fingerprinting by $^1\text{H-NMR}$ (*Pausinystalia johimbe*)

[B] $^1\text{H-NMR}$

► Sample preparation

- Crude extracts 123#A: 6.78 mg/200 μl ; 123#B: 5.84 mg/200 μl ; 123#C: 5.03 mg/200 μl
- Yohimbine: 0.93 mg/200 μl
- Solvent: $\text{DMSO-}d_6$ (99.9%), Cambridge Isotope Laboratories, Inc. (Cas #: 2206-27-1, Lot #: 12G-464)

► Instrument

- Jeol ECZ 400 MHz in 3 mm NMR tube under the Ultra COOL probe

► Parameter (qNMR)

- Temperature 25°C
- 90° single-pulse (relaxation delay: 60sec, receiver gain: 46, number of scan: 64)

Conclusions:

Identification of a Commercial Plant Powder declared as *Pausinystalia johimbe*

- Microscopic analysis of the commercial plant powder showed reticulated vessels, long thin fibers and medullary ray. Other unknown fragments were also observed. The commercial sample may contain bark powder and has the same color than referenced *P. johimbe* bark in monographs.
- The DNA sequences obtained for ITS-2 were dirty, showing overlapping of multiple amplified sequences. The clean portion of the rbcL sequence displayed 90% of homology with a referenced sequence of *Pausinystalia species* from GenBank. **There is a lack of referenced DNA sequences of *P. johimbe* in Genbank.** The universal primers used for psbA-trnH and matK could not lead to any PCR amplification for this species.
- HPTLC and ¹H-NMR analyses confirmed the presence of yohimbine and/or analogues in all extract replicates.
- All the data gathered herein demonstrated that the commercial powder contains *Pausinystalia johimbe*, DNA based identification of this type of samples appeared to be challenging due to the presence of PCR inhibitors (e.g. tannins), the low yield of extracted DNA, and the lack of referenced sequences.

Botanical Information (*Senna alexandrina*)

Conclusions:

Identification of a Commercial Plant Powder Declared as *Senna alexandrina*

- The microscopic analysis of the commercial powder revealed the presence of trichomes, paracytic stoma, leaf transverse sections with stomata, thereby suggesting that the powder contains grinded leaves.
- All the amplified DNA sequences (MatK, psbA-trnH and rbcL) confirm that this commercial sample contains ***Cassia senna* L. (*Senna alexandrina* Mill.)**.
- The HPTLC and UHPLC-UV analyses confirmed the presence of both sennosides A and B in all three extract replicates. The chemical complexity of the produced extracts did not favor the detection of such specific compounds using ¹H-NMR analysis.
- All the gathered results, herein presented, confirmed the botanical identity of the commercial powder as leaves of ***Senna alexandrina* Mill. or *Cassia senna* L.**

Phytochemical Fingerprinting by UHPLC (*Trigonella foenum-graecum*)

[B] UHPLC (190 nm)

Gradient method

► Instrument

- Shimadzu UFLC (Shimadzu Corp) with DAD and fluorescence detector
- Column: Kinetex 1.7 μm XB-C18 100Å column (50.0 X 2.1 mm Phenomenex, USA)
- Software: Shimadzu Labsolution software package
- Solvent system: CH_3CN /Water gradient from 95% to 5% water with 0.1% formic acid

► Sample preparation

- Crude extracts (10 mg/ml) and reference compound (1 mg/ml) prepared in 50% CH_3CN /water

Phytochemical Fingerprint by $^1\text{H-NMR}$ (*Trigonella foenum-graecum*)

[C] $^1\text{H-NMR}$

► Sample preparation

- Crude extracts: 123#A: mg/200 μl ; 123#B: mg/200 μl ; 123#C: mg/200 μl
- Diosgenin: 2.32 mg/200 μl
- Solvent: $\text{DMSO-}d_6$ (99.9%), Cambridge Isotope Laboratories, Inc. (Cas #: 2206-27-1, Lot #: 12G-464)

► Trigonelline²¹: 3.0 mg in $\text{DMSO-}d_6$

- Varian UNITY plus 400 MHz spectrometer.
- Number of scan: 100 scans; spectra width: 0.187 Hz/point; spectra width 14400 Hz; pulse width 4.0 μs , relaxation delay 1s acquiring time 2.67 μs ; temperature 25°C

► Instrument

- Jeol ECZ 400 MHz in 3 mm NMR tube under the Ultra COOL probe.

► Parameter (qNMR)

- Temperature 25°C, 90° single-pulse (relaxation delay: 60sec, receiver gain: 46, number of scan: 64)

Conclusions:

Identification of a Commercial Plant Powder: *Trigonella foenum-graecum*

- The microscopic analyses of the commercial powder revealed the presence of epidermis and parenchyma. The coloration and smell of the commercial powder also clearly suggested that the commercial sample contains Fenugreek seeds.
- All the obtained DNA barcode sequences matched with referenced *T. foenum graecum* DNA sequences in GenBank, thus, confirming the identity of the plant species as being *T. foenum-graecum*. The universal MatK primers used in this study could not amplify any sequence for this species.
- HPTLC and ¹H NMR analyses suggested the presence of trigonelline in the prepared crude extracts. However, the presence of diosgenin could not be confirmed by any analytical methods used here. ¹H NMR fingerprints revealed the presence of diverse aliphatic chains (possibly fatty acids) together with saponin/steroid derivatives.
- According to our macroscopic/microscopic and DNA barcoding analyses, the commercial sample contains *T. feonum-graecum* seeds. However, our phytochemical fingerprinting methods need to be optimized to better target the detection of amino acids, fatty acids and saponin constituents.

Identification of *T. pratense* plant material

DNA barcodes, and Phytochemical Profiling

Extraction Method Leading to the Chemical Profiles as Presented in The Following Slides

Two types of extracts were prepared:

- Solvent A: Dichloromethane/Methanol 1/1, v/v
- Solvent B: Ethanol/ Water 8/2 v/v
 - Plant/ solvent ratio: 50 g/ 700 mL = 1/14 (g/mL)
 - Rinsing after extraction: 300 mL
- Extraction methods:
 - **Sonication** 30 min + maceration overnight

Ultrasonic extraction of cellular matter

Ultrasonic extraction from cells: the microscopic transverse section (TS) of apical stem of mint (*Mentha piperita*) shows the mechanism of actions during ultrasonic extraction from cells (magnification 2000x) [resource: Vilku et al. 2011]

Method used:

Duration 30 min

Amplitude: 80%

Pulse on: 20 sec

Pulse off: 5 sec

No Heat

Phytochemical Fingerprinting by HPTLC (*Trifolium pratense*)

A: *T. pratense*_CH₂Cl₂/CH₃OH (50/50, v/v)
B: *T. pratense*_EtOH/H₂O (80/20, v/v)
S1: Biochanin A
S2: Formononetin

Biochanin A

Formononetin

▶ Sample Preparation

- Reference compounds: 1 mg/ml in the 100% CHCl₃

▶ HPTLC Plate

- HPTLC silica gel F₂₅₄ [EMD]

▶ HPTLC Solvent System

- Hexanes/EtOAc/acetone/MeoH (6/1/1/0.4)

▶ HPTLC Image Capture

- UVP MultiDoc-It Digital Imaging system (254 nm, 365nm)

▶ HPTLC condition

- Instrument: CAMAG Automatic TLC Sampler 4
- Band Length (mm): 4.0
- Application volume (µl): 5.0
- Filling speed (µl/s): 11.0

Phytochemical Fingerprinting by UHPLC (*Trifolium pratense*)

[B] UHPLC (254 nm)

► Instrument

- Shimadzu UFLC (Shimadzu Corp) with DAD and fluorescence detector
- Column: Kinetex 1.7 μ m XB-C18 100 \AA column (50.0 X 2.1 mm Phenomenex, USA)
- Software: Shimadzu Labsolution software package
- Solvent system: CH₃CN/Water gradient from 95% to 5% water with 0.1% formic acid

► Sample preparation

- Crude extracts (10 mg/ml) and reference compound (1 mg/ml) prepared in 100% MeOH

Phytochemical Fingerprinting by ^1H -NMR (*Trifolium pratense*)

[C] ^1H -NMR

► Sample preparation

- Crude extracts: 80% EtOH/water CE (8.03 mg/200 μl), 50% $\text{CH}_2\text{Cl}_2/\text{CH}_3\text{OH}$ CE (6.85 mg/200 μl)
- Biochanin A: 3.87 mg/200 μl , Formononetin: 3.15 mg/200 μl
- Solvent: $\text{DMSO}-d_6$ (99.9%), Cambridge Isotope Laboratories, Inc. (Cas #: 2206-27-1, Lot #: 12G-464)
- Number of scan: 100 scans; spectra width: 0.187 Hz/point; spectra width 14400 Hz; pulse width 4.0 μs , relaxation delay 1s acquiring time 2.67 μs ; temperature 25°C

► Instrument

- Jeol ECZ 400 MHz in 3 mm NMR tube under the Ultra COOL probe.

► Parameter (qNMR)

- Temperature 25°C, 90° single-pulse (relaxation delay: 60sec, receiver gain: 46, number of scan: 64)

Conclusions:

Identification of a Commercial Plant Powder: *Trifolium pratense*

- All the obtained ITS-2 and rbcL DNA barcode sequences matched with referenced *T. pratense* DNA sequences in GenBank, thereby confirming that the commercial plant material contains *T. pratense*. The universal MatK and psbA-trnH primers used could not amplify any sequence for this species. More specific primers should be designed for that purpose.
- All HPTLC, UHPLC-UV and ¹H NMR analyses confirmed the presences of major characteristic *T. pratense* isoflavonoids such as formononetin and biochanin A in both extracts. HPTLC and ¹H NMR analyses indicated that these extracts contained a relatively high proportion of chlorophylls, fatty acids and glucosidic derivatives.
- Both DNA barcoding and phytochemical analyses confirm that the investigated commercial sample contains *T. pratense* crushed leaves.
